NewLync-AS Address Book

One-Stop Solution

Redstone Enterprise Address Book Management Software complements Redstone REX series and Redstone NewLync, offering digital collaborative communication solutions. It supports up to 100,000 members with unlimited department levels, allowing flexible organizational structure management for large enterprises.

Core Functions

- **Hierarchical and Decentralized Management:** Multi-level management of organizations and branches with hierarchical authorization.
- **Flexible and Adaptable:** Customizable address book templates and business card information based on organizational structure.
- **Quick and Accurate Search:** Search by name, extension, department, email, and other keywords.
- **Permission Management:** Visibility control based on department and labels.
- **Privacy Management:** Manage visibility of privacy information for leaders and executives.
- **Address Book Security:** Supports content auditing, operational auditing, and quick deletion of contacts for resignations or suspensions.

Multi level permissions

The maximum capacity : *100000* Contacts

The address book addresses multi-level needs in large organizations, improving efficiency in finding people, communication, and meetings across various units and levels.

Caller ID

Visible Caller ID

Incoming call information includes keywords like contact name, extension, department, and email, helping recipients quickly assess the call's importance.

Address Book LDAP

Unified Data Source for Hierarchical Integration

Address book LDAP supports multi-level enterprise structures, integrates with LDAP and personnel systems, and allows batch imports of employee information for quick setup and updates.

Preserve old systems

Fully protect corporate assets

The address book ensures compatibility and unified management across PC, app, and mobile devices, supporting various brands and models.

Flexible configuration

Flexible visibility configuration

Flexible visibility settings ensure appropriate access to personnel information, protecting sensitive data and managing public/hidden information for special departments.

Address Book LDAP

Safe and Reliability

Redstone continuously strengthens technological innovation in the design and development of software and hardware for the address book function, ensuring safety, reliability, and independent controllability.

Capacity	Members: Supports up to 100,000 members, expandable as needed. Departments: Unlimited number of departments, expandable as needed. Search Capability: Multi-dimensional search (numbers, Chinese pinyin, names) for quick contact retrieval.
API Interface	RESTful API: Create, modify, delete, and query address book data; integrates with third-party systems. CSV Interface: Batch import/export for easy data migration and management. LDAP Interface: Integrates with internal LDAP servers for synchronization and sharing.
